

### Overview - User friendly and powerful

**Whatever the style and capacity/size of your hospitality establishment, we'll** accommodate you. Whether it be a city-hotel or a county-hotel, a B&B or a Lodge, a Caravan park, a Game Farm or a multi-styled Resort - with or without Timeshare and/or Fractional Ownership. Whether you are Self-Catering or Full-Service or any combinations of all these, **whatever the variety - we are ready to assist you.**

We understand that **no two places are exactly alike** and there are many differences from one property to another. Inns have been around since biblical times and one would think that things would be standardized, but that simply isn't the case. Few software packages are able to cope with the variety. Most only work in one particular accommodation style. We on the other hand have learned how to satisfy the diversity making **our product one of the very few that can do it with ease and accuracy.**

**The-Host *Hospitality Management System*** is very easy to use, AND it is also a **very-powerful and sophisticated software package**

The following table lists the main components of the reservation system and their interactions. The table is partially obscured by a large watermark.
